Book Reviews

Gaby Weiner	*Towards Female-centred Forms of Knowledge*
Bryan Chapman	*On Restructuring School Science Education*

STUDIES IN SCIENCE EDUCATION

is an international review of research for all who are interested in the educational dimensions of science. It is not intended to compete with existing journals, but to complement them by providing reviews of research on specific aspects of science education and by drawing together, in analytical surveys, recent contributions which may be published in widely scattered sources. Its editorial policy is to encourage work which reflects a wide variety of viewpoints, including those of administration, anthropology, curriculum, history, linguistics, philosophy, politics, psychology and sociology.
